

Here we are again on the topic of ecosystems. This time it's a focus on stability and diversity. You are hearing this lecture from a top level university. MIT has put many of their lectures online and free for the public's education. This video obviously contains info on the topics of stability and diversity, but it also offers more. This is a great way to see what college is like compared to highschool. This is a taste of how information will be presented as you continue your education.

Your assignment is to watch the following video and write about it.

<https://www.youtube.com/watch?v=IC3XSwQ62iw>

“Ecosystem stability, critical transitions, and biodiversity”
by MIT OpenCourseWare

The idea we are working with is 20 minutes a day per class.

This means you won't be able to finish the video unless you go over on time spent working. So, you do NOT have to finish the video.

Each day you should spend 15 minutes watching and 5 minutes writing.

You can write a summary of the video, your feelings on part of it, opinions or personal information you want to share.

Share your google doc and make the subject of your email

WEEK 8 - ECOLOGY
